Crane lifts superstructure onto BC Place

RICHARD GILBERT

Mega Cranes performs a lift at the BC Place roof construction project, which is scheduled for completion on Sept 30. BC Place is undergoing a major revitalization that includes the installation of the largest cable-supported retractable roof of its kind in the world. The 36 masts and compression beams that make up the steel superstructure of the new retractable roof at BC Place are now in place. The cable-net system to support the new fabric roof is being installed.
